

AMERICAN JOURNAL OF PHYSICAL ANTHROPOLOGY

Official Organ of The American Association of Physical Anthropologists
Published by the Wistar Institute of Anatomy and Biology, Philadelphia

THE AMERICAN JOURNAL OF PHYSICAL ANTHROPOLOGY publishes articles on every aspect of physical anthropology: human evolution, human variation and human biology. In particular, articles of significance to all teaching anthropologists, and those of related interest, are presented, such as recent discoveries or studies of fossil man, new evidence on racial distributions and history from blood groups, new methodological developments, and critical surveys of particular problems and fields. Published bi-monthly, 2 volumes of 3 numbers each annually contain over 600 pages of original articles, numerous short comments, preliminary notices, and reviews.

Subscription may be had by membership in the American Association of Physical Anthropologists, for which dues are \$10.00 yearly, including the Journal, and Studies in Physical Anthropology. Membership is open to professional anthropologists, professionals in cognate sciences, advanced graduate students, and others who have demonstrated interest by publication or professional activity. Application may be made to the Secretary-Treasurer of the Association, Dr. Francis E. Johnston, Department of Anthropology, University of Texas, Austin, Texas 78712.

Non-member and institutional subscriptions are \$20.00 a volume, \$21.00 foreign, and should be made to The Wistar Institute of Anatomy and Biology, Philadelphia, Pa. 19104.

JOURNAL DE GÉNÉTIQUE HUMAINE

Publié par A. Franceschetti (Genève), L. VAN BOGAERT (Anvers) et M. LAMY (Paris). Secrétaire:
D. KLEIN, Institut universitaire de Génétique médicale, 8, chemin Thury, 1206 Genève

Vol. 17, Nos. 1/2

mai 1969

W.-R. FELGENHAUER: Hypertrichosis lanuginosa universalis.

E. GENEÉ: Une forme extensive de dysostose mandibulo-faciale.

V. IONASCOU et N. LUCA: Hétérozygous state of galactosemia with clinical signs of the disease?

ANDRÉ LEGUEBE: Consanguinité et endogamie.

A. K. RAY: A pedigree of osteogenesis imperfecta.

A. K. RAY: Two isolated cases of Apert's syndrome from India.

S. P. A. TOLEDO et P. H. SALDANHA: A radiological and genetic investigation of achropody in a kindred including six cases.

S. C. TIWARI: The incidence of colour-blindness among the Tibetans.

O. R. VIDAL, A. DAMEL et J. CORDERO FUNES: Dermatoglyphics in retinoblastoma.

J. H. WHITE: Oculo-nasal dysplasia.

PREMCHAI YUNIBHAND: Enlarged satellites and other variants of chromosome structure in a Swiss family.

L. GAYRAL et J. GAYRAL: Epilepsie et hérédité-dégénération spino-cérébelleuse.

G. BOREUX: La grodermie ostéodysplasique à hérédité liée au sexe, nouvelle entité clinique et génétique.

WALTER F. HABERLANDT: Le questionnaire génétique (suicide familial et conseil génétique).

Analyses de livres.

A la mémoire du professeur Paul Moureau (1904-1968).

Parution: quatre numéros par année. Annual Subscription: Swiss Frs. 45.00

Genetic Markers in Human Blood

by *ELOISE R. GIBLETT, M.D.*

PERTINENT FINDINGS OF WORLD AUTHORITIES on the genetic markers are concisely described here, with pointed and valuable notes on the applications and contributions to the broader understanding of biological mechanisms.

INSTRUCTIONS FOR LABORATORY PROCEDURES are provided by the author, with guidance on demonstration by serological and biochemical techniques, particularly starch gel electrophoresis.

A NOTEWORTHY SINGLE VOLUME in which Dr. Giblett brings together descriptions of those components of human blood which exhibit heritable variations sufficient to be classified as genetic polymorphism.

MANY ILLUSTRATIONS AND HELPFUL TABLES are included.

CONTENTS

The Immunoglobulins and Their

Allotypes: Gm and Inv

Haptoglobin

Transferrin

The Gc System

Beta Lipoprotein Allotypes: The Ag and Lp Systems

Pseudocholesterase

Plasma Alkaline Phosphatase

Other Genetic Markers in Plasma

The Red Cell Antigens: Blood Groups

Hemoglobin

Red Cell Acid Phosphatase

Glucose-6-Phosphate Dehydrogenase

6 Phosphogluconate Dehydrogenase

Phosphoglucomutase

Adenylate Kinase

Other Enzyme Markers in Blood Cells

Contributions of Blood Genetic Markers to Studies
of Human Biology

Glossary

656 PAGES, ILLUSTRATED. \$15.00

Honored for its brilliant, broad coverage!

Blood Groups in Man

by *R. R. RACE and RUTH SANGER*

This New (5th) Edition is fully up-to-date in all departments and covers significant new developments in the field, with numerous important contributions from international workers. A highly informative book which is, at the same time, a delight to read.

592 PAGES, ILLUSTRATED. \$19.00

Edited by H. HARRIS and C. A. B. SMITH with the assistance of

JULIA BELL

MARY N. KARN

R. R. RACE

JEAN EDMISTON

L. S. PENROSE

J. A. F. ROBERTS

Annals of Human Genetics publishes original research on all aspects of human genetics, including work on cytogenetics, biochemical genetics, population genetics, clinical genetics, and biometrical and mathematical genetics. The journal also publishes book reviews and bodies of original data *in extenso* to make them available for future study.

Annual subscription price (1 volume of 4 parts) \$26.00

Published for the Galton Laboratory, University College, London, by
CAMBRIDGE UNIVERSITY PRESS, 32 East 57th Street, New York, N.Y. 10022

Now there are

34

professional journals from
The University of Chicago Press

Epidemiology of Mongolism

By ABRAHAM M. LILIENFELD with
the assistance of Charlotte H. Benesch
Dr. Lilienfeld reviews chromosomal ab-
normalities in mongolism as well as the
incidence of mongolism in terms of ra-
cial and ethnic grouping, parental age,
birth order, maternal and prenatal fac-
tors, familial and geographical distribu-
tion, association with other diseases,
biochemical aspects, mortality experi-
ence, and other factors. 176 pages \$7.00

The Causes of Blindness in Childhood

*A Study of 776 Children with Severe
Visual Handicaps*

By G. R. FRASER and A. I. FRIEDMANN
with a preface by L. S. PENROSE "We be-
lieve this book is a major contribution to the
study of human genetics as well as human
blindness."—*American Journal of Ophthalmol-
ogy* 272 pages \$12.00

Proceedings of the Third International Congress of Human Genetics

Edited by JAMES F. CROW and JAMES V.
NEEL "This book provides a wealth of in-
formation about human genetics."—*Medical
World News* 566 pages \$16.50

What's
90+%
new?

And more
necessary
than ever?

The University of Chicago Press Manual of Style

Twelfth Edition/Completely Revised

Prepared by the Editorial Staff of
The University of Chicago Press

“. . . crown this the queen of reference
books . . .”—*Saturday Review*

“The Chicago manual remains a classic in
its field . . .”—*The New York Times*

“. . . an indispensable guide and reference
work that belongs in all secondary school,
public, college and university, and special
libraries, and which anyone who writes
should own.”—*Science Books*

Since 1906 the Chicago *Manual of Style* has been a *sine qua non* (should that be in italics?) among people who live by the printed word—authors, editors, copywriters, advertisers, researchers, journalists, typographers, printers, proofreaders, publishers, scholars. Now in its 12th (twelfth?) edition—the first revision since 1949 and the most extensive ever made—the *Manual* has been completely restructured. With more than 90% (percent? per cent?) of the material new, it now follows the step-by-step creation of a book from start to finish:

Part 1, BOOKMAKING: The Parts of a Book • Manuscript Preparation • Proofs • Rights and Permissions • *Part 2, STYLE:* Punctuation • Spelling and Distinctive Treatment of Words • Names and Terms • Numbers • Foreign Languages in Type • Quotations • Illustrations, Captions, and Legends • Tables • Mathematics in Type • Abbreviations • Notes and Footnotes • Bibliographies • Citing Public Documents • Indexes • *Part 3, PRODUCTION AND PRINTING:* Design and Typography • Glossary of Technical Terms • BIBLIOGRAPHY of Books Useful to Authors and Editors • INDEX.

Today, after having been the universal preference for 63 (sixty-three?) years, the *Manual* is even more indispensable in all fields—including the scientific, now that important new references to the technicalities of preparing copy for scientific publications have been added. The *Manual* is, quite simply, the most modern, complete, and carefully organized guide of its kind that has ever been published. (For answers to the stylistic questions raised above, consult the *Manual of Style*.)

SOCIAL BIOLOGY

(formerly EUGENICS QUARTERLY)

To further knowledge of the biological and
sociocultural forces affecting human populations

EDITORIAL BOARD: Dudley Kirk, *Chairman*, Richard H. Osborne, *Editor*, Gordon Allen, Irving I. Gottesman, and Norman B. Ryder.

Vol. 15, No. 2

CONTENTS

June 1968

Theories of Mate Selection, *Bruce K. Eckland*

The Effect of Assortative Mating on the Genetic Composition of a Population, *James F. Crow and Joseph Felsenstein*

Assortative Mating by Educational Attainment in Relation to Fertility, *Clyde V. Kiser*

Assortative Marriage, *Robert J. Garrison, V. Elving Anderson, and Sheldon C. Reed*

Assortative Mating with Respect to Physical Characteristics, *J. N. Spuhler*

Selective Mating, Assortative Mating, and Inbreeding: Definitions and Implications, *Richard Lewontin, Dudley Kirk, and James Crow*

Brief Reports:

As the Geneticist Sees It, *Nikolai Dubinin*

Book Reviews: Demography, *Clyde V. Kiser*; Genetics, *Arnold R. Kaplan*

Periodical Abstracts: Genetics, *Gordon Allen*; Demography, *Jeanne Ridley*

Published quarterly for the AMERICAN EUGENICS SOCIETY, Inc. by The University of Chicago Press, 5750 Ellis Ave., Chicago, Illinois 60637. Subscription \$9.00 (foreign, \$7.00); membership \$9.00 (foreign \$4.00); single copy \$2.75 plus postage.

Human Heredity

Founded in 1948 by
GUNNAR DAHLBERG

Editor: M. HAUGE,
Copenhagen

HUMAN HEREDITY, formerly ACTA GENETICA ET STATISTICA MEDICA is an international journal which publishes papers in English on the genetics of normal characters and pathological traits in man. Articles on statistical problems and methods related to human and medical genetics are also brought. Only original contributions are published. The journal appears bimonthly.

Subscription price per volume of 6 issues US \$30.00 (postage included).

Please ask for specimen copies.

Blood groups are classified into four groups depending upon two types of chemical substances found in the blood , which are : Antigens are found on the surface of red blood cells , they are two types which are Antigens A and Antigens B . Antibodies are antithetic to antigens and found in blood plasma , They are two types which are Anti-a and Anti-b . Each group of blood has certain antigens and their corresponding antibodies that agglutinate with them, For example, Antigens (A) are agglutinated with antibodies (anti-a). The type of a blood group can be determined through the reactions occur between antigens and antibodies and the occurrence of agglutination of blood , Therefore , for determining a blood group both types of antibodies (anti-a) and (anti-b) are needed .
