5 Conclusions and Future Directions. An Introductory Review of Information Theory in the Context of Computational Neuroscience. Mark D. McDonnell Institute for Telecommunications Research. University of South Australia Mawson Lakes, SA 5095, Australia.Â

Feedback refers to achieving a task, such as keeping a car travelling at a constant speed, by re-peatedly measuring the current state, such as the carâ€™s speed, and feeding those measurements back and using them to make the requisite changes at the input, such as applying more or less pressure to the accelerator of the car.Â Information theory was invented in response to practical problems faced by the designers of com-munication systems such as telephones and data modems.
