

Using the MMPI-2 in Forensic Assessment

James N. Butcher, Giselle A. Hass, Roger L. Greene,
and Linda D. Nelson

The Minnesota Multiphasic Personality Inventory-2 (MMPI-2) is one of the most widely researched and used assessment tools in psychology. Forensic psychologists often rely on it to evaluate clients involved in civil and criminal cases. Because the test results can have a significant influence on court decisions, psychologists need to understand how to make full use of the MMPI-2 in forensic settings.

Building on his popular series of MMPI-2 books, James Butcher and his coauthors present this guide that is based on decades of research and personal experience. Following a brief overview of the MMPI-2 and its various scales, the authors further explore its applications in various forensic settings, including personal injury and workers' compensation claims, immigration relief and deportation cases, and criminal investigations. Clear, practical guidelines bolstered by illustrative case examples will help psychologists – understand legal and cultural factors that may influence the assessment process; evaluate neuropsychological issues, such as brain injury employ computerized interpretations present results in testimony and written reports

ISBN: 978-1-4338-1868-4

Table of Contents

- 1 Preparing for Court Testimony With the MMPI-2
 - 2 Importance of Assessing Response Attitudes in Forensic Evaluations
 - 3 Overview of the MMPI-2 Clinical, Content, and Supplementary Scales
 - 4 Cultural Factors in Forensic Assessment With the MMPI-2
 - 5 The MMPI-2 in Neuropsychological Assessment
 - 6 The MMPI-2 in Personal Injury Evaluations
 - 7 The MMPI-2 in Workers' Compensation Evaluations
 - 8 The MMPI-2 in Immigration Evaluations
 - 9 The MMPI-2 in Custody and Child Protection Evaluations
 - 10 The MMPI-2 in Cases of Intimate Partner Violence
 - 11 The MMPI-2 in Correctional Settings
 - 12 Computer-based Interpretation in Forensic Evaluations
 - 13 Writing Assessment Evaluation Reports in Forensic Settings
 - 14 The MMPI-2-Restructured Form
 - 15 Summary, Conclusions, and Future Directions
- References

Using the MMPI-2 in Forensic Assessment

About the Authors

James N. Butcher, PhD, is a professor emeritus in the Department of Psychology at the University of Minnesota. He was awarded honorary doctorates for his international personality assessment research (Doctor Honoris Causa) from the Free University of Brussels, Belgium, in 1990 and from the University of Florence, Italy (Laurea ad Honorem in Psychology) in 2005. He received the Bruno Klopfer Award from the Society for Personality Assessment in 2004 for longstanding contributions to personality assessment. He has maintained an active research program in the areas of personality assessment, abnormal psychology, cross-cultural personality factors, and computer-based personality assessment. He has conducted extensive research on the MMPI in a broad range of contexts. His publications include basic research works in abnormal psychology, personality assessment, and the MMPI, including research methodology and computer applications of psychological tests. Dr. Butcher is a coauthor of the book: *MMPI, MMPI-2, & MMPI-A in Court: A Practical Guide for Expert Witnesses & Attorneys*, 3rd edition (by K.S. Pope, J.N. Butcher, & J. Seelen; published by the American Psychological Association). Butcher's forensic testimony, the source of much material included in this book, has been extensive and covers many types of legal cases. His court testimony almost always focuses on the interpretation of MMPI-2 scores. Issues concerning technical aspects of the test or the likely meaning of a particular MMPI configuration, or the assessment of symptom validity are common themes in his court testimony.

Giselle A. Hass, PsyD, is a forensic expert and consultant for local and national family and immigration Courts. She is a native of Costa Rica and was a Forensic Psychologist in her own country before she migrated to the U.S. She earned a Doctorate in Clinical Psychology from Nova Southeastern University and is licensed both in Virginia and Washington D.C.. Dr. Hass is currently an Adjunct Professor of Law at Georgetown University Law Center, Center for Applied Legal Studies; a Forensic Psychologist for the Assessment Center, Washington D.C. Department of Behavioral Health; and a Psychologist for The Ainsworth Attachment Clinic, Charlottesville, Virginia. Dr. Hass has co-authored articles and book chapters in assessment, immigration and culture, parenting and divorce issues.

Roger L. Greene, PhD, is a Distinguished Emeritus at Pacific Graduate School of Psychology in Palo Alto University in Palo Alto CA, where he worked for over 20 years. Dr. Greene has worked in a variety of clinical settings and with different types of patients in his clinical career. His particular area of interest clinically is in the assessment and treatment of alcohol and drug abuse. He has written a number of texts and articles on the use of the MMPI-2 both clinically and forensically. His most recent book, *The MMPI-2/MMPI-2-RF: An Interpretive Manual* (3rd ed.) was published in 2011. He recently received the Bruno Klopfer award from the Society for Personality Assessment for lifetime contributions to the field of assessment. His books on the MMPI-2 have been among the standard references for over two decades.

Linda D. Nelson, PhD, has a thriving private practice in Santa Monica where she evaluates and treats patients with neurological and psychiatric problems. She is a Qualified Medical Evaluator for the State of California, and is regularly called on to perform Independent Medical Examinations (IMEs) on suspected head injury cases. After serving as Vice Chair of Neurology for 16 years at the University of California, Irvine, Dr. Nelson assumed a faculty position at the University of California, Los Angeles. As Professor Emerita, UCLA, she currently conducts research on the link between Alzheimer's disease and Down syndrome and maintains an active teaching role in the area of undergraduate neuroscience. Dr. Nelson received her doctorate in clinical psychology from the Ohio State University, where she studied with MMPI experts, Philip Marks, James Butcher, and Alex Caldwell. She published extensively on the MMPI and later went on to complete postdoctoral training in clinical neuropsychology from the University of California, Los Angeles. Her professional career has emphasized evaluation and assessment, with the MMPI, and later the MMPI-2, remaining a staple in her adult forensic test batteries.
