The revolutions across Central and Eastern Europe in 1989 serve as a benchmark of contemporary revolution. These revolutions overturned the communist governments from East Germany to Poland to Bulgaria in a span of six months. But they were a product of pent-up political repression that had been building for decades. When the moment finally came, the revolutions were supported by the majority of the population of each state and brought out nearly all segments of society onto the streets.Â Countless demonstrations will be held around the world with varying levels of conviction, but revolutions are rare geopolitical phenomena. Connected Content. Regions & Countries. Phenomenon of transdisciplinarity was put into the fore of analysis rather recently. In the article an attempt is made to find out whether it is possible to attribute this phenomenon not only to a science (or even non-classical post-non-classical) of the 21st century, or we have here the case where some scientific realities come to the attention of researchers with certain delay and has its value for the culture in general? It is possible to judge even the emergence of a kind of cognitive revolution affecting both science culture.Â The scientific revolution here means a radical revision of the admissibility of accepted and proven methods, goals and values that are common to the members of the scientific community.
