VOLUME I
Satya N. Atluri

METHODS OF COMPUTER MODELING IN ENGINEERING & THE SCIENCES VOLUME I by Satya N. Atluri

[ISBN: 0-9657001-9-4]; 600 pages

The last 3 decades of the 20th century saw the intense development of the new discipline, then commonly known as Computational Mechanics. The two methods of computational mechanics that were widely developed were the Finite Element Method (FEM) and the Boundary Element Method (BEM). A large number of books were written, dealing exclusively with either the FEM or the BEM. In this century, the discipline has undergone a radical enhancement, leading to the more general paradigms of Modeling & Simulation Based Engineering, and Computer Modeling in Engineering & the Sciences.

The present book is on the evolving discipline of Computer Modeling in Engineering & the Sciences. It presents, for the first time, *a unified treatment of a variety of computer modeling strategies*, including: Collocation Method, Sub-domain Method, Finite Volume Method; Finite Element Method; Field/Boundary Element Method; The Meshless Local Petrov-Galerkin (MLPG) Method for Domain & Boundary Discretizations; Boundary Methods for certain linear problems, etc. Both Primal & Mixed Methods are presented. Linear & Nonlinear, Static & Dynamic problems; eigen-value problems of buckling and vibration; and acoustic radiation & scattering problems are discussed.

A carefully chosen sample problem is solved, throughout the book, by using the various methods, and the solutions by the various meth-

ods are compared as to their accuracy, convergence, and efficiency. MathLab or FORTRAN programs are included, to illustrate the computer solutions by a wide variety of methods listed above.

This unique book should be of great interest to graduate students, professionals, and researchers in all disciplines of engineering & the sciences.

Contents

Part I Weak Forms, Weighted Residuals, Collocation, Subdomain, Finite Volume, Finite Element, Field/Boundary Element, Meshless Local Petrov-Galerkin, and Boundary Methods, for Linear & Nonlinear Problems

I Introduction; II A Thin Beam on an Elastic Foundation; III Collocation, Subdomain, & Finite Volume Methods: §3.1 Point Collocation Method; §3.2 Weighted Integral Square Error Method; §3.3 Subdomain Integral/Average Error Method; §3.4 The Finite Volume Method; IV The Weighted Residual Method; V Local Element-wise Basis Functions: The Galerkin Finite Element Method Based on a Symmetric weak-Form; VI Numerical Quadrature; §6.1 Numerical Quadrature; VII Details of Implementation of the Galerkin Finite Element Method; §7.1 An Algorithm for the Assembly of the Global Stiffness Matrix in FEM; §7.2 Boundary Conditions; §7.3 Linear Equation Solver; VIII Shear Flexible Beam; Locking in Galerkin FEM; & Locking Free Formulations; IX Primal & Mixed Galerkin Finite Element Formulations for a Realistic Beam on an Elastic Foundation; §9.1 Segmental formulation of FEM for a Realistic Beam; §9.2 Single Field or Primitive Variable Symmetric Variational Form; §9.3 Multi-field or Mixed Variable Symmetric Variational Finite Element Method; §9.4 Mixed Method; Limitation Principle; Degenerating to Single-Field Method; §9.5 Complementary Energy Approach; §9.6 Mixed/Hybrid Methods in Solid Mechanics: X Unsymmetric Weak Forms; Field/Boundary Integral Equations; & The Field/Boundary Element Method; XI Meshless Trial & Test Functions & The Primal & Mixed Meshless Local Petrov- Galerkin (MLPG) Methods; §11.1 Introduction; §11.2 Meshless Interpolation of the Trial Function: the MLS Method; §11.2.1 Accuracy of the MLS Interpolation; §11.2.2 Generalized moving least squares interpolation; §11.3 Local Weak Forms and the Primal & Mixed MLPG Methods; §11.3.1 The Unsymmetric Weak Form 1; §11.3.2 Unsymmetric local weak form 2; §11.3.3 Symmetric local weak form 3; §11.3.4 Unsymmetric local weak form 4; §11.3.5 Unsymmetric local weak form 5; §11.4 The MLPG Mixed Methods ; §11.4.1 Mixed MLPG Method Based on Independent Interpolations; §11.4.2 The Mixed MLPG Methods Based on Independent Interpolations of all the variables; §11.4.3 Conclusions; §11.5 Shear flexible beams: seamless analysis from thick to thin beams; §11.6 Appendix I: The Fortran code; XII Nonlinear Problems; §12.1 Introduction; §12.2 Piecewise Linearization; §12.3 Solving by Collocation; §12.3.1 The Newton-Raphson Iterative Solution Procedure; §12.4 Subdomain Method; §12.5 The Finite Volume Method; §12.6 The Finite Element Method; §12.7 The Boundary Element Method; §12.8 The Mixed MLPG method; XIII Eigen-Value Problems, Bifurcation Buckling, Vibration, & Transient Dynamic Response; §13.1 Bifurcation Buckling; §13.2 Linear Free & Forced Vibration; §13.3 Direct Integration with respect to the Time Variable.

Part II The Poisson & Helmholtz Equations: FEM, BEM, & Meshless Methods

XIV The Poisson & Helmholtz Equations: Finite Element, FIELD- Boundary Element, & Meshless Methods; §14.1 Introduction; §14.2 The Finite Volume Method for the Poisson Equation; §14.3 The Galerkin FEM for the Poisson Equation; §14.4 The MLPG Method for Domain Discretization;

§14.4.1 The moving least-squares approximation scheme in 2 & 3 Dimensions; §14.4.2 The influences of the type of weight function, and of the geometry of the weight-function support domain; §14.4.3 Shepard functions; §14.5 The partition of unity (PU) methods; §14.6 Reproducing kernel particle interpolation (RKPM); §14.7 Compactly supported radial basis functions (CS-RBFs); §14.8 Smoothed particle hydrodynamics; §14.9 Interpolation errors in meshless interpolations; §14.10 Summary of meshless interpolations of trial functions; §14.11 The Meshless Local Petrov-Galerkin (MLPG) Method; §14.12 The imposition of essential boundary condition in the MLPG approach; §14.13 The Boundary Element Method for the Poisson Equation; §14.14 Summary; XV The Boundary Element and the MLPG Method for the Discretization of Boundary/Integral Equations (BIE); §15.1 Introduction; §15.2 Weakly-singular traction & displacement BIE in 3-D solid mechanics; §15.3 MLPG approaches for solving the weakly-singular BIEs; §15.3.1 The MLPG approach; §15.3.2 Variants of the MLPG/BIE: several types of interpolation (trial) and test functions, and integration schemes; §15.3.3 Closure; §15.4 Numerical experiments; §15.4.1 Cube under uniform tension; §15.4.2 3D Lame problem; §15.4.3 A concentrated load on a semi-infinite space (Boussinesq problem); §15.4.4 Non-planar crack growth; §15.4.5 Closure; XVI Non-Hyper-Singular Boundary Integral Equations For Acoustics, & Their Solutions Through BEM, & MLPG/BIE Methods; §16.1 Introduction; §16.2 The governing wave equation, and its fundamental solution; §16.3 Boundary integral equations for ϕ , and $\phi_{,x}$; §16.4 Numerical results; §16.5 Direct BEM Discretizations of R- ϕ -BIE & R-q-BIE; §16.6 Conclusion; §16.7 Appendix: The Matlab code for BIEs; References

About the Author

Satya N. Atluri is a distinguished scholar based at UCI, where he is the holder of the Samuelli/von Karman Chair in Aerospace Engineering. He has been affiliated with a number of universities, including UCLA, Georgia Tech (Institute Professor, Regents' Professor of Engineering; and Hightower Chair Professor); Tsinghua University, Beijing (Honorary Professor); KAIST, Korea (Honorary Professor), and others.

He is a Member of the U.S. National Academy of Engineering, a Foreign Fellow of the Indian National Academy of Engineering, a Fellow of the Third World Academy of Sciences, a Member of the European Academy of Sciences, an Honorary Member of the World Innovation Foundation, an Honorary Fellow of the International Congress on Fracture, and a Fellow of several learned societies, such as the American Academy of Mechanics, AIAA, the Aero. Society of India, ASME, and others.

He is also the recipient of numerous awards in recent years, including: Distinguished Alumnus, Indian Institute of Science; The HILBERT MEDAL of ICCES; the Excellence in Aviation Award, from the U.S. Federal Aviation Administration; President's National Medal of Technology Distinguished Service Award, from the US Secretary of Commerce; Pendray Aerospace Literature Award, from AIAA (American Institute of Aeronautics & Astronautics); Structures, Structural Dynamics, and Materials Medal from the AIAA; The SDM Lecture Award, from the AIAA; Honorary Technical Editor, Aeronautics & Astronautics, Encyclopaedia of Life Support Systems, UNESCO; "Highly Cited Researcher" (one of the 100 most highly cited researchers in all branches of engineering, over the last 20 years (Institute of Scientific Information,); The Cemal Eringen Medal in Engineering Science from the Society of Engineering Science; Technical Achievement Award, from the US National Academy of Engineering; The Aerospace Structures & Materials Medal, from the American Society of Civil Engineers; "Excellence in Computational Mechanics" Medals from Greece and Japan; Fellowship from the Japan Society for Promotion of Science; The ICES Gold Medal; Doctor of Science (Honoris Causa) from Ireland; Sustained Research Award from the Society of Sigma-Xi; Distinguished Professor Award of 1986, from Georgia Tech; Outstanding Researcher Award from Georgia Tech, 1986 & 1990; Midwestern Mechanics Lecturer; Southwestern Mechanics Lecturer; and others.

He is the Founder & Editor-in-Chief of "CMES: Computer Modeling in Engineering & Sciences", "MCB: Mechanics & Chemistry of Biosystems"; and is the Honorary Editor of "Computers, Materials, & Continua". He has previously served as the Editor/Editorial Boards of 20 other journals. He has authored/ edited over 45 monographs and books; and is an author of over 750 articles in the archival literature, in a variety of engineering, mathematics, and computational modeling journals.

At the University of Washington, Georgia Tech, UCLA, and UCI, he has advised over 80 doctoral students, and more than 150 post-doctoral fellows, who are currently serving as administrators and distinguished professors at universities, and as senior leaders in industry and government, in various parts of the world.

Impact Factor of Cmes-Computer Modeling In Engineering & Sciences, 1526-1492, Journal Impact Factor report. Journal Abbreviation: CMES COMP MODEL ENG. Journal ISSN: 1526-1492. Journal impact factor details. 2017/2018 Impact Factor : 0.581. 2016 Impact Factor : 0.67. 2015 Impact Factor : 0.841. 2014 Impact Factor : 1.03. How to increase the visibility of the articles. JCR - Journal Citation Report. Recently viewed journals. Journals. 3.652 IEEE ASME T MECH. IEEE-ASME Transactions on Mechatronics. More Details. The development of computer methods for the solution of scientific and engineering problems governed by the laws of mechanics was one of the great... This is accomplished through advanced mathematical modeling and numerical solutions reflecting a combination of concepts, methods and principles that are often interdisciplinary in nature and span several areas of mechanics, mathematics, computer science and other scientific disciplines as well. It covers any type of computational method for the simulation of complex physical problems leading to the analysis and design of engineering products and systems.
