Lost at the Frontier: U.S. Science and Technology Policy Adrift (1985),

We shall consider the whole frontier belt, including the Indian country and the outer margin of the "settled area" of the census reports. In the settlement of America we have to observe how European life entered the continent, and how America modified and developed that life and reacted on Europe. Our early history is the study of European germs developing in an American environment. For example, he may study the origin of our land policies in the colonial land policy; he may see how the system grew by adapting the statutes to the customs of the successive frontiers.[18] He may see how the mining experience in the lead regions of Wisconsin, Illinois, and Iowa was applied to the mining laws of the Rockies,[19] and how. Science, Technology, and the Clash of Values. Chair: Jane Maienschein, professor, philosophy of science, Arizona State University. Biology and medicine--stem cells, cloning, patenting of genes, genetic therapy. Harold Shapiro, President, Princeton University. Environment--the clash over the role of technology in such issues as global warming, biodiversity, genetically modified crops. Integrity in research as a social contract. The scientist as public servant. David Guston, associate professor of public policy, Rutgers Univ. Respondent: Albert H. Teich, Director, Science and Policy Programs, American Association for the Advancement of Science. Friday morning August 25. DEPART.
